COMPLETE LIFECYCLE POWER SOLUTION

With 40+ locations, 1,600+ professionals, and 64,000+ power assets, including 25,000 dedicated to temporary power, Sunbelt Solomon delivers fully integrated permanent and temporary power solutions across North America and globally. We design, build, deploy, maintain, and restore critical power systems for infrastructure where downtime is not an option. From initial engineering through emergency response and end-of-life asset recovery, we maintain control across the entire power lifecycle.

WHAT SETS US APART

We deliver complete power lifecycle control through a single integrated operating model that unifies engineering, field execution, manufacturing, and asset renewal.

- End-to-end engineering, consulting, and automation & control capabilities
- Integrated permanent and temporary power infrastructure solutions
- Rapid-response field services and emergency power deployment in hours, not weeks
- Asset life extension, recovery, and decommissioning programs
- OEM- and ANSI-standard remanufacturing, rewinding, and restoration
- Electrical safety training and compliance embedded across the lifecycle

ENGINEER → BUILD → OPERATE → MAINTAIN → EXTEND → RECOVER

A continuous operating framework defining how we design, deliver, and sustain critical power infrastructure from initial concept through end-of-life recovery.

ENGINEER

Design and development of power systems through advanced engineering, system studies, protection coordination, and control architecture.

BUILD

Manufacture and assembly of power infrastructure using OEM- and ANSI-standard processes for new and integrated systems.

OPERATE

Field commissioning and system activation to ensure full performance, compliance, and operational readiness.

MAINTAIN

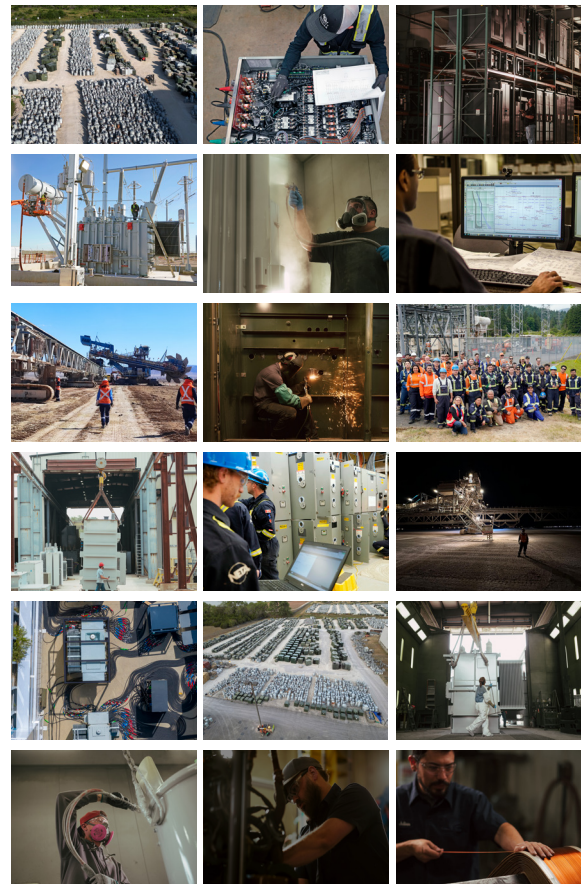

Testing, diagnostics, and predictive maintenance programs ensuring reliability, safety, and continuous operation.

EXTEND

Retrofit, upgrade, remanufacture, and rewind programs that extend asset life and improve system capability and performance.

RECOVER

Decommissioning, asset recovery, and reconditioning to reclaim value and safely reintegrate or retire equipment.

INTEGRATED POWER CAPABILITIES

CORE CAPABILITY PLATFORMS

ENGINEERING & SYSTEM DESIGN

Power system studies, protection coordination, arc flash analysis, substation design, and automation architecture.

FIELD SERVICES & COMMISSIONING

Electrical testing, commissioning, diagnostics, predictive maintenance, and system verification.

AUTOMATION & CONTROLS

PLC, HMI, and SCADA integration, modernization, and digital system upgrades for operational visibility and control.

MANUFACTURING & REMANUFACTURING

OEM- and ANSI-standard fabrication, reconditioning, rewinding, and full equipment restoration.

LIFECYCLE & ASSET SERVICES

Maintenance programs, retrofit engineering, life extension, asset recovery, and decommissioning.

POWER DELIVERY & RAPID DEPLOYMENT

We deliver both planned infrastructure and emergency response power through a unified system designed for speed, flexibility, and reliability.

We mobilize critical power infrastructure in hours or days, supporting outages, planned shutdowns, capital projects, and emergency events.

- Permanent power system design and deployment
- Temporary and emergency power solutions
- Equipment rental and rapid mobilization
- Field-deployed system integration and support

With 64,000+ power assets in circulation, including 25,000 dedicated to temporary power, we provide immediate access to mission-critical infrastructure anywhere it is required.
